

AGRALITE LOAD MANAGEMENT EQUIPMENT

Agralite would like to thank you for choosing to use our load management program. We are in the process of updating our load management equipment. Agralite would like our members to make note of the following required care of the new equipment being installed.

Agralite equipment must remain on at all times.

- **The Submeter and Load Control Switch need to be reporting to us daily. If this equipment stops reporting for any reason, we assume there is an issue and will be calling.**
- **Please do not, for any reason, shut off the load management equipment.**
- **If you are leaving for the winter and would like to shut off your water heater, please make sure that doing so does not affect our equipment. If it does, you will need to add a disconnect to shut off just the water heater.**
- **If you are unable to leave this equipment on, you may be removed from our load management program.**

Please contact the office if you have questions in regards to the load management program.
